(54) METAL HARDWARE FOR ATTACHING A PANEL

(57) [Abstract]

[Object] Utilizing a panel 1 used as a concrete form for a framework, and easy adjustment an unevenness of the panel 1 due to a bulge made by an installation of a concrete from a surface of the panel 1.

[Configuration] A metal hardware including a head member 5 to be connected to a panel 1 so as to rotate freely; a connecting portion 6 having a thread connection to the head member 5; and an anchor member 7 next to the connecting portion 6 with an anchor portion 4. The head member 5 is fixed to a panel as a concrete form, as well as fixing the anchor member 7 thereto. The anchor portion 4 is fixed and buried into a concrete wall 3 which was installed. An unevenness of the panel 1 is adjusted by rotating the head member 5 from the surface of the panel 1.
